

How to Create SWF Photo Slideshow?

The following guide is going to show you how to **convert photos to flash swf format (*.swf)**, **convert pictures to swf file**, and **create SWF photo slideshow** using [Photo DVD Burner Professional](#).

<http://www.photodvdburner.com/photo-dvd-burner.exe>

1. Organize Photos

Click the *Organize Photos* tab in **Photo DVD Burner** to create one or more albums, select photos from a folder in your computer hard drive and add them to the album.

In the sub-tab of *Album Photo*, you can add or remove photos, rotate photos, set album thumbnail, arrange the order of the photos, etc. **Note:** Double-click one single photo in the album and you will be able to personalize the photos (transition, Pan & Zoom, Text, ArtClips, Subtitle, Brightness / Contrast, etc) one by one in the Photo Configuration window.

Switch to the *Transition & Music* tab, and you can set background music, specify transition effect/duration, photo duration, randomize photo transitions, etc.

In the *Album Theme* tab, there are lots of album themes available for you to choose from. You may also add separate photos to the beginning and end of the album, and edit album beginning title and ending title, such as text, effect, duration, background color, etc.

Also you are allowed to preview the whole album before the conversion by clicking the *Album Preview* button.

2. Choose Output Format

Click the *Burn Disc* tab at the top menu to go to the conversion window. Then click the Output Format drop-down menu and choose **SWF/FLV Movie** for the slideshow. And in the Parameters Setting area, you can specify output directory, profile (Flash SWF Format), and video/audio parameters such as video bitrate, size, codec, frame rate and audio codec, bitrate, sample rate, channel.

3. Convert Photos to Flash SWF Format (*.swf)

After you set the above parameters, you click the *Create Now!* button and start **creating swf photo slideshow**.
