

How to Make Photo Slideshow with Transition Effect

Making a slideshow of your favorite photos using [Photo DVD Burner Professional](#) is as easy as 1, 2, 3. However, adding some transition effects to the slideshow, you can actually bring your still photos to life in just a few minutes.

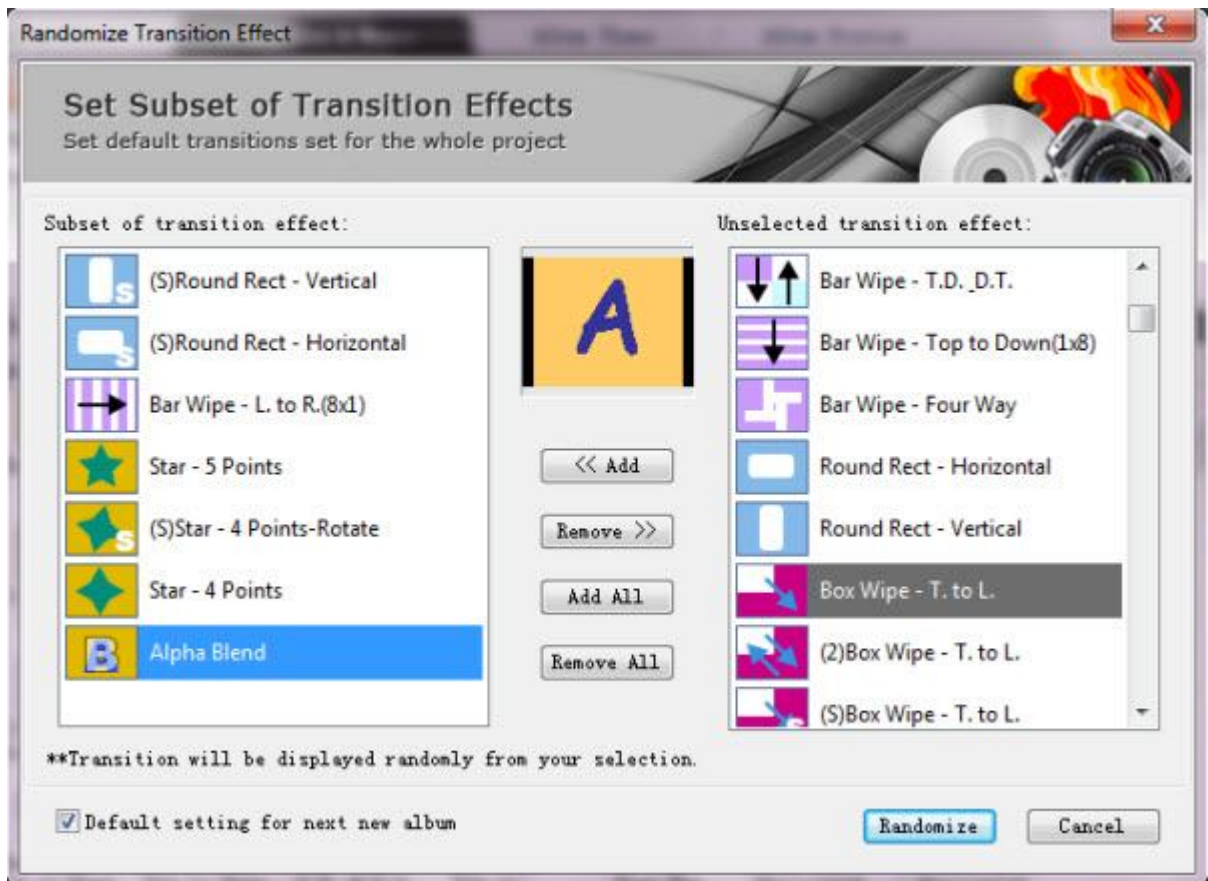

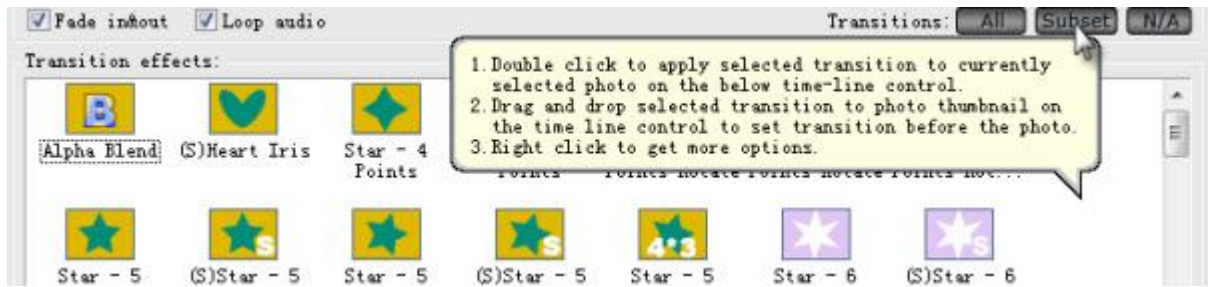

In the first step of "Organize Photos", go to the "Transition & Music" tab to apply transition effects to your photo album.

In the "Transition effects" area, right-click one of the transition effects to apply it to selected photos or all photos of the current album. You can also choose to randomize photo transitions from some pre-selected transitions or all available transitions, disable transitions, etc.

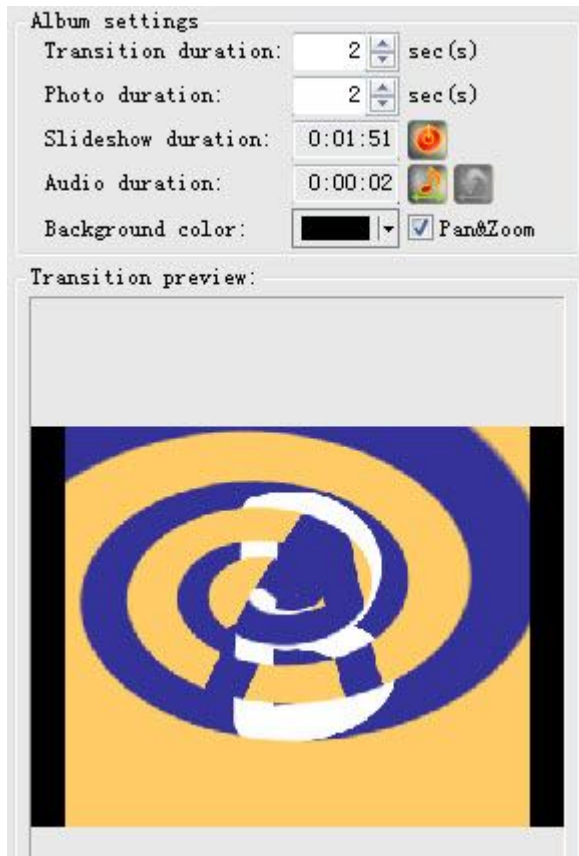

How to Pre-select Transitions?

Click the "Subset" button to choose your favorite transition effects as pre-selected ones.

Tip: You can click the "Remove All" button to remove all transition effects from the subset first. Then add your favorite effects from the right panel to the left subset.

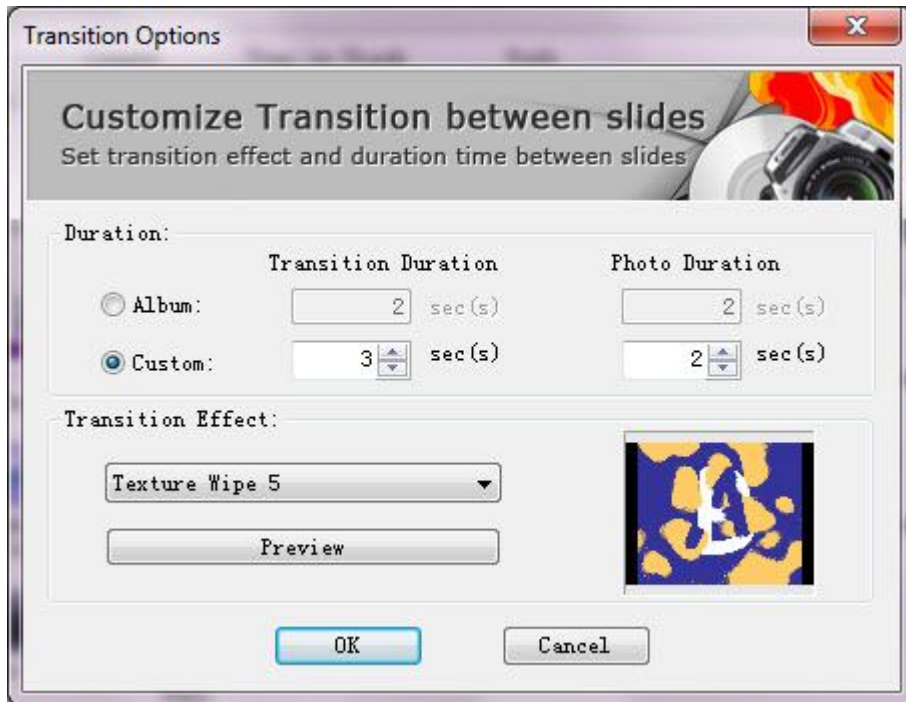

In the "Album settings" area, you can specify the transition duration. Also, if you click one of the transitions, you can preview it in the "Transition preview" area.

Below the "Transition effects" area, there is the timeline of your slideshow.

Right click one of the transitions in the timeline, and you will be able to customize it.

Alternatively, you can click one of the photos in the timeline to customize the transition.
